

PICTURE-PERFECT FACSIMILES *enlarged from* MICROFILM MASTER NEGATIVES

A fast new low-cost service

RECORDAK

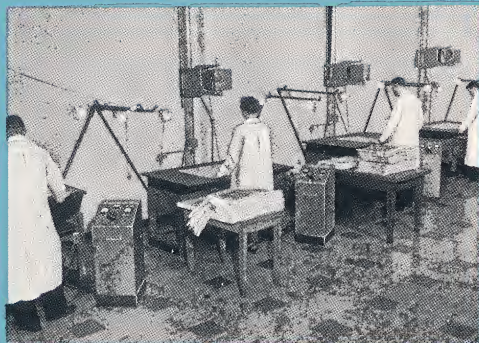

1 RECORD OR 100,000...reproduced quickly ...with **RECORDAK**

You can get copies of documents or drawings *fast* with Recordak's Photographic or Electrostatic Print Service. Once on film, paper copies can be reproduced at a speed as high as 1,200 linear feet per hour!

This new Recordak Reliant 500 Microfilmer with Kodamatic Indexing photographs documents at speeds up to 500 per minute. It can be purchased outright—or rented on a proportionately low monthly basis.

Recordak Customer Service Department will microfilm your records safely and quickly at the nearest Recordak laboratory—or in your own office if you prefer—so that documents will be available for reference during filming.

Now you can reproduce important records fast. Recordak's nationwide integrated microfilming and reproduction service makes it possible. And the cost is low! Here's how the Recordak system works:

Suppose you want to reproduce one or more copies of all your vital record files, engineering drawings, stockholder proxies, or whole file cabinets of card records. Or perhaps you want to supply copies of certain documents to a large number of branch offices. For example, a bank may want to keep a facsimile of each depositor's signature card on file at each of its branches as a customer convenience. Or an insurance company needs an extra copy of each policyholder's medical report.

First, the records are microfilmed in your own machine or ... if you prefer ... in a nearby Recordak laboratory. Immediately, you have a "security" film copy. Then, any time you need copies, Recordak will produce either Photographic or Electrostatic prints — on single or double weight paper ... even on 100% rag stock.

Reproduction cost is surprisingly low

If your records are already microfilmed as part of your regular systems or security routine, the Recordak Electrostatic Print method of continuous roll form reproduction can save up to 40% over other multiple copy systems. Look at these sample costs of original-size copies on single-weight paper from either 16mm or 35mm microfilm:

DOCUMENT SIZE	COST AS LOW AS:
3 x 5 in.	2½ cents
4 x 5 in.	3 cents
8½ x 11 in.	6 cents

(Prices subject to change without notice)

Get copies fast

Usually—when you need copies of documents or drawings — you need them in a hurry. Recordak gives them to you *fast*. The automatic Electrostatic-Print equipment used in Recordak processing stations is of the newest high-speed design. Once records are on film, copies are reproduced at a speed of 1,200 feet per hour. That's over 1,200 copies the size of a letter-size document. In the case of a 3 x 5 file card, it means *over 4,000 copies per hour!*

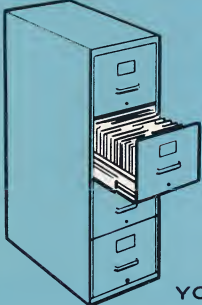

And microfilm gives you this added safeguard

Every one of your important records should be microfilmed, so you can store original records or the processed film at another location ... thus averting loss by fire, flood or other disaster.

Up to 3,000 letter-size documents can be photographed on a 100-foot roll of microfilm at average reduction ratios ... even more at higher reduction ratios.

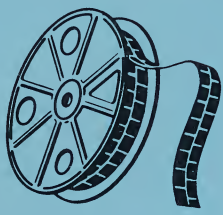

...accurately...economically

Photographic or Electrostatic Prints
